

VERBAL CONSENT PROOF

Rep: *"To verify your identity securely, may I send you a one-time verification text from VerifyAI to confirm you're the account holder? You'll receive one message with a secure link. Msg & data rates may apply. Reply STOP to opt out, HELP for help."*

Customer: **"Yes."**

Rep action: Send verification text — only after that yes.

Key disclosures included in the consent ask:

- Msg & data rates may apply
- Reply STOP to opt out
- Reply HELP for help

The verification text is never sent before the customer's explicit spoken "yes."

VerifyAI — Toll-Free Verification — Opt-In Type: Verbal

This is the verbal consent moment. Immediately after this "yes," the customer receives the text and taps the secure link — see the resulting screen on the next page.

CUSTOMER-FACING PROOF

The screen below is what the customer sees immediately after the “yes” on the previous page, once they tap the secure link they just agreed to receive. This is supporting evidence of the post-consent experience — the opt-in itself is the verbal exchange on page 1.

Note: the verification method shown (PIN, Face ID, or Fingerprint) can vary by business configuration. PIN is enabled by default; biometric options are available depending on the business's plan.

Additional Context

VerifyAI sends a one-time verification text with a secure link during a live support interaction, only after the customer gives explicit spoken permission, so the customer can confirm they are the account holder. This is not a self-service web sign-up and not a generic passcode login — it is a single spoken exchange between a representative and a customer, on an active call.

“VerifyAI: Tap to confirm your identity: [secure link]. Reply STOP to opt out. Msg & data rates may apply.”
